

# SHAREPOINT CONSULTING SERVICES

Adopting the appropriate technology is key to unlocking greater employee satisfaction and improving your company's overall success.

## BUSINESS CASE

A Human Services Provider in Pennsylvania tapped enkompas BI to re-design and re-architect its Intranet site using SharePoint. The first three months post launch, the Intranet site increased **monthly visitors from 35,000 to 95,000** proving that an easy-to-use, well-architected site that serves the needs of employees creates higher engagement and satisfaction!

## BENEFITS OF SHAREPOINT

Driven by a demand for a powerful and integrated collaboration platform, Microsoft SharePoint has become one of the most utilized tools by enterprises. SharePoint provides an excellent user experience so that you can:

- Create internal social communities (like an Intranet) that support document management, content sharing, associated workflows, and links to other applications
- Unleash reliable document collaboration through co-authoring and versioning
- Offer flexible "anytime, anywhere, any device" access from the web to your information and processes
- Connect or link files into the Microsoft search engine, which scans the content of readable files and gives you the option to organize and search based on custom metadata
- Simplify the user interface and reduce end user confusion by decreasing the number of independent, isolated systems
- Provide better support for compliance with organizational policies, standards, and regulations
- Optimize the security footprint of your information sharing, collaboration, and content management systems
- Support better collaboration with your partners and clients through secure external access to information

## TIME TO TRANSITION

Mobility, Big Data, and Collaboration are no longer trends but ingrained in how we function both personally and professionally. To meet the expectations of 21st century employees and customers, leading organizations are transitioning away from legacy processes and systems. Moving data, applications, and workflows from isolated collaboration and information-sharing systems to a modern Enterprise Content Management (ECM) platform is an essential step to move your company forward.

## WHY ENKOMPAS BI

As part of an award-winning IT Consulting firm with 25 years experience enkompas BI focuses on helping clients move to, and live in, a more flexible and robust digital workspace. Whether you're planning a migration to the cloud, or you need to optimize a current SharePoint deployment, our services and solutions help you:

- Automate business processes
- Improve collaboration
- Engage employees
- Enable everyone to do their best work

## CLOUD SOLUTION EXPERTS

The lead architect at enkompas BI has over 10 years of experience building MS365 cloud solutions for entities spanning small businesses to global Fortune 500 enterprises. We are well versed in:

- Data Warehousing
- Active Directory (Hybrid) and Cloud security measures
- MS365 integrations with PowerApps + PowerAutomate, PowerBI, Azure, and SharePoint

## A HUMAN TOUCH

We are known for being technology experts with a human touch. A partnership with enkompas BI means your technology build will be optimized for human interaction and expertly designed for ease of use, engagement, and longevity. It's what we refer to as "the art of technology consulting."

## REASONS TO MIGRATE TODAY

If you're using earlier versions of SharePoint or other systems including network file structures, STOP! Migrate to the latest cloud version of SharePoint so you can:

- 1 Improve collaboration
- 2 Automate repetitive business processes
- 3 Leverage search capabilities
- 4 Make content available anywhere, on any device
- 5 Simplify content management
- 6 Increase data security
